【講題】

Nancy Cartwright 的證據理論及其挑戰

I critically evaluate Cartwright's Argument Theory of Evidence, in which evidential relevance is built on a sound argument. The Argument Theory is useful for reminding us of inferential gaps and can explain why something previously labelled as evidence may no longer serve as evidence. However, I argue that because of its demand for deductive entailment, this theory faces difficulties that boil down to warrant transmission failure. I point out that a major limitation of this theory is the absence of guidance on knowing that the premises of an argument are true.
